Altera

INSIGHTS REPORT · PROTEIN RATIO

THE PROTEIN RATIO OF YOUR CATALOGUE

784 products classified, two reference methodologies applied to the same product base, and the levers the figure points to.

Harbour Market · Sales FY2026 SAMPLE REPORT

Fictitious data · Harbour Market, its brands and its figures are invented.

AT A GLANCE

WWF · protein-rich foods (FG1)

26.7%

Planetary Health Diet · 60%

WWF · whole diet

52.3%

Planetary Health Diet · 74%

Protein Tracker · all protein

35.9%

Altera

ONE CATALOGUE, CLASSIFIED PRODUCT BY PRODUCT

The figure does not come from a sample. It comes from your whole range, crossed with your sales volumes.

784

products classified, from the barcode to the food group, out of 800 rows received: non-food, test items and unsold products set aside.

24,184 t

of product sold over the year, that is 1,323 t of protein put on the market.

48%

of the protein comes with a value declared in your file. The rest is completed from reference sources, each value with its source.

WHAT STAYS WITH YOU.

Classification happens at Altera; your sales volumes are never sent to the AI. The deliverable makes the calculation reproducible line by line: every product carries its protein value, the source of that value, its plant / animal split and its data level.

- A catalogue classified once serves both methodologies, and any that come after.

Altera classification of the Harbour Market catalogue · protein values declared by the retailer, completed with Open Food Facts and NEVO, the national food table and the Altera reference base · sales volumes FY2026.

Fictitious data · Harbour Market, its brands and its figures are invented.

TWO METHODS, TWO FIGURES, ONE CATALOGUE

WWF measures the weight of the products sold; the Protein Tracker measures protein. Both are right: they do not answer the same question.

WWF PLANET-BASED DIETS

Food group 1, protein-rich foods

26.7%

of Food Group 1 is of plant origin, measured in weight of product sold.

Planetary Health Diet reference: 60% plant.

WWF, WHOLE DIET

the seven food groups together

52.3%

of the diet you sell is plant, in weight and dairy equivalents.

Planetary Health Diet reference: 74% plant.

THE PROTEIN TRACKER

Green Protein Alliance · ProVeg

35.9%

of the protein you sell is of plant origin.

Dutch supermarkets, 2025 average: 42.6%.

WHY THE GAP BETWEEN THEM IS SO WIDE.

The Protein Tracker counts all protein, including that of bread, pasta and flour: refined grains alone weigh 12.8 points of your 35.9%. WWF Food Group 1 keeps only protein-rich foods, where meat, eggs and fish outweigh pulses and nuts.

- The publishable figure depends on the method. What costs is not having two; it is changing scope without being able to rebuild the history.

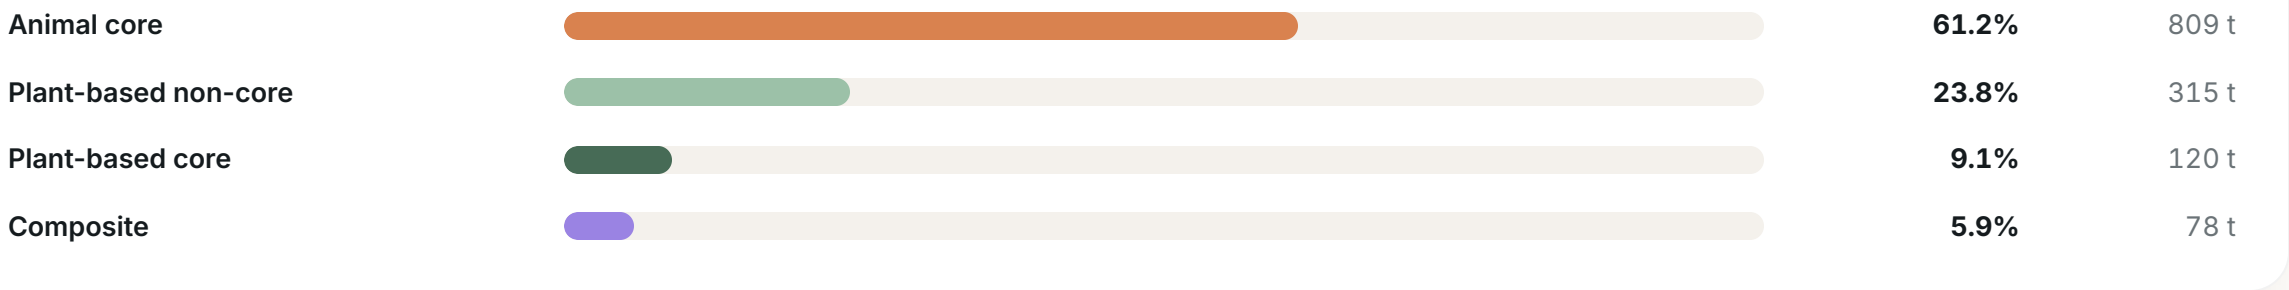

WWF and Protein Tracker tabs of the workbook · WWF Planet-Based Diets, retailer methodology, Appendix D · Green Protein Alliance and ProVeg Nederland, The Protein Tracker 2025.

Fictitious data · Harbour Market, its brands and its figures are invented.

Altera

WHERE THE PROTEIN YOU SELL SITS

1,323 t of protein, spread over the methodology's four classes, each product in one class and one only.

THE KEY POINT.

Dutch supermarkets averaged 42.6% plant protein in 2025, 6.7 points above Harbour Market. With 61% of your protein in animal core, the main lever is shifting animal core towards plant, more than reworking composites.

- Widening the plant range without touching the animal core moves the figure only at the margin.

Protein Tracker tab of the workbook, classes computed on your volumes · Dutch average: The Protein Tracker, National Supermarket Protein Split 2025.

Altera

WHAT CARRIES THE ANIMAL, WHAT CARRIES THE PLANT

The same 1,323 t, broken down to the level the methodology describes. Shares of all protein sold.

WHERE THE ANIMAL PROTEIN IS

809 t, 61.2% of the protein sold

Red meat	**217 t · 16.4%**
Poultry	**164 t · 12.4%**
Cheese	**110 t · 8.3%**
Milk, yoghurt and cream	**109 t · 8.2%**
Fish and seafood	**85 t · 6.4%**
Processed meats and dishes	**81 t · 6.1%**
Eggs	**38 t · 2.9%**
Other animal products	**7 t · 0.5%**

WHAT CARRIES YOUR PLANT SHARE

435 t outside composites, 32.9% of the protein sold

Refined grains	**169 t · 12.8%**
Fruit and vegetables	**64 t · 4.8%**
Pulses	**61 t · 4.6%**
Whole grains	**39 t · 2.9%**
Nuts	**27 t · 2.0%**
Discretionary products	**21 t · 1.6%**
Plant-based dairy alternatives	**11 t · 0.8%**
Other plant lines	44 t · 3.3%

- The 78 t of protein in composites, where animal and plant share the same recipe, are dealt with apart.

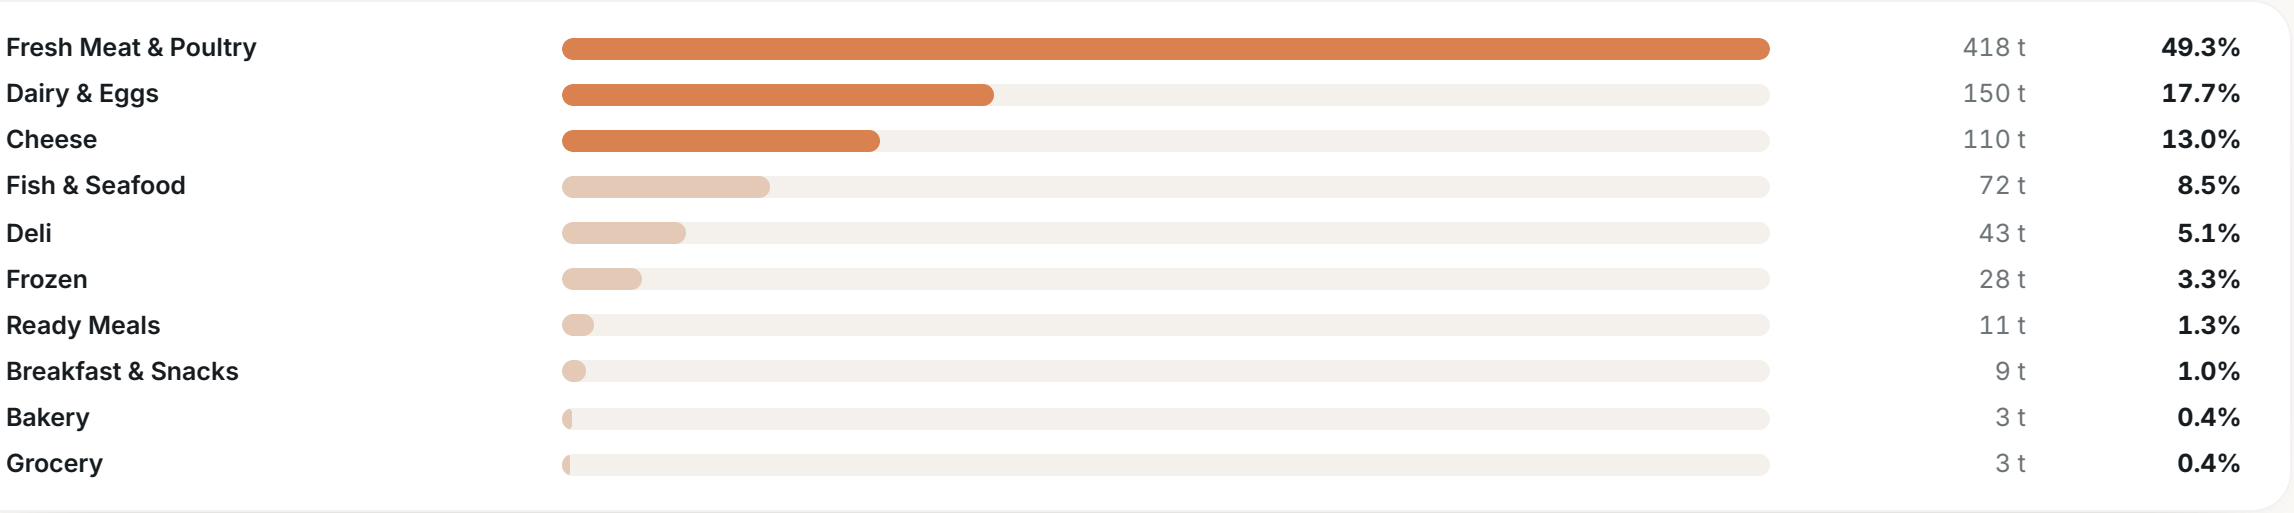

Protein Tracker tab of the workbook, detail by sub-category.

Fictitious data · Harbour Market, its brands and its figures are invented.

Altera

3 DEPARTMENTS CARRY 80% OF ANIMAL PROTEIN

848 t of animal protein, by department of your own grid. The action plan does not need to cover all 784 products.

WHAT IT MEANS FOR THE ACTION PLAN.

3 departments carry 80% of the animal protein you sell, and 7 product families carry 69%. A plan that treats these families moves the figure; a plan built elsewhere, however ambitious, will not.

- Meat and poultry come first, but dairy and cheese together carry 31% of animal protein: the second front.

By department and By family tabs of the workbook · the ten first departments shown.

Altera

54% OF THE PROTEIN IS UNDER YOUR OWN BRAND

15 brands in the catalogue. Yours alone carries more protein than all national brands together.

54.1%

of the protein sold is under Harbour Market, across 460 products.

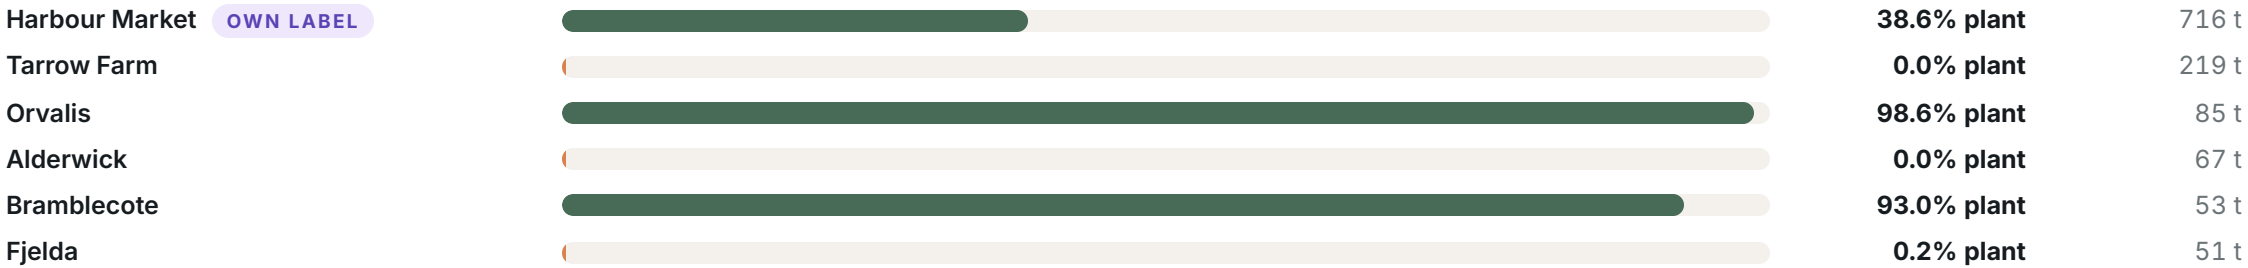

45.9%

under 14 national brands.

38.6%

plant share of your own label, against 32.7% for national brands.

PLANT SHARE, BRAND BY BRAND

- Harbour Market weighs 54.1% of all protein sold, at 38.6% plant: your own label is the lever you control most directly.

By brand tab of the workbook · plant share computed on protein, the Protein Tracker's unit.

Fictitious data · Harbour Market, its brands and its figures are invented.

Altera

COMPOSITES, 5.9% OF YOUR PROTEIN

Products where animal and plant protein coexist in the same recipe, from ready meals to biscuits.

78 t

of protein carried by composites, between animal and plant.

58%

of this protein still split 50/50 by convention, for lack of a recipe.

51%

of composite mass is meat-based, 1.9% fish-based.

COMPOSITION OF COMPOSITES, BY WEIGHT

Meat-based **51.1%** Vegetarian **39.6%** Seafood-based **1.9%** Vegan **7.4%**

THE YEAR-1 STEERING INDICATOR IS NOT THE RATIO.

It is the share of products moved to level A, those whose real plant / animal split is known. Every product that moves from B to A makes the figure more accurate without any product changing, and makes reformulation measurable the following year.

- A product that moves from B to A does not change your range. It changes what you can prove about it.

WWF and Data tabs of the workbook · levels A and B as defined by the Protein Tracker · composites are 3.4% of measured sales by weight.

Fictitious data · Harbour Market, its brands and its figures are invented.

Altera

LOOSE PRODUCE MAY NOT ALL BE IN THE FIGURE

What carries a barcode is measured. What is weighed at the till goes through in-store codes, and part of it may be missing from the file.

↑ LOOSE FRUIT AND VEGETABLES

30 products sold by weight, 1,413 t. They pull towards plant, but are low in protein: the effect is real and limited.

• BARCODES THAT FAIL THE CHECK

5 codes with a wrong check digit, matched by their label rather than by barcode.

• WEIGHTS READ FROM THE LABEL

64 products came without a net weight. Altera read it from the label, and the workbook says so.

IF HALF OF THE LOOSE PRODUCE WAS NOT TRANSMITTED, THE THREE RATIOS WOULD BECOME

WWF, FOOD GROUP 1

26.7% → **26.7%**

unchanged

WWF, WHOLE DIET

52.3% → **55.3%**

up about 3 points

PROTEIN TRACKER

35.9% → **36.4%**

up about 0.5 points

Food Group 1 does not move: fruit and vegetables belong to Food Group 4.

● As soon as you know what share of loose sales was not transmitted, we recalculate your ratio.

Altera estimate from the measured catalogue, assuming half of the loose sales absent · orders of magnitude to frame the reading.
